

Abdulwahed Mansour

Platform / DevOps / SRE Engineer

Stockholm, Sweden · +46 76 930 8145 · abdulwahed.mansour@gmail.com

github.com/abdulwahed-sweden · linkedin.com/in/abdulwahed-sweden · EU work eligibility · Stockholm / hybrid / remote

Covers: Platform Engineer · DevOps Engineer · Site Reliability Engineer (SRE) · Cloud Engineer

SUMMARY

Engineer who ships and *operates* what they build. 15+ years across backend development and the infrastructure that runs it — containers, CI/CD, multi-cloud, and production hardening. I've taken systems from local dev to live deployment on AWS/GCP/Azure and Base L2 mainnet, with circuit breakers, process supervision, and alerting wired in. I also attack operational complexity at the source: I authored **RustIO**, a Rust web/admin framework whose apps deploy as a **single binary with no build step and no frontend pipeline**, backed by one Postgres source of truth with a built-in audit trail. Security-research background means hardening and least-privilege are defaults, not afterthoughts. I optimise for reliability you can reason about: deterministic deploys, observable systems, and graceful degradation.

TECHNICAL SKILLS

AREA	TECHNOLOGIES
Deployment model	single-binary Rust services (authored RustIO) — no build step, no frontend pipeline, Postgres-first, audit trail built in
Containers / Orchestration	Docker, Docker Compose, multi-stage builds, non-root images
CI/CD	GitHub Actions (lint + test + deploy), parallel pipelines, automated migrations
Cloud	AWS, GCP, Azure (core compute, storage, networking)
IaC / Config	Terraform, Nginx, Gunicorn, PM2 process management
Reliability	circuit breakers, rate limiting, graceful degradation, exponential-backoff retries, health checks
Observability	structured logging, performance tuning, debugging under load
Hardening	SSH lockdown, UFW firewall, fail2ban, HSTS, secrets handling, least-privilege
Languages	Python, Rust, Bash, SQL — automation & tooling
Data infra	PostgreSQL 16, Redis, Elasticsearch — operations, migrations, query tuning

EXPERIENCE

Independent Backend & Infrastructure Engineer — 2010 – Present · Stockholm

Built and operated CI/CD pipelines, containerized deployments, and hardened cloud infrastructure for 35+ projects.

Security Researcher (part-time) — 2022 – Present · Immunefi / Sherlock / Code4rena · Remote

Server hardening and infrastructure threat modeling as a discipline.

SELECTED PROJECTS

HuntLoan — Production Bot on Base Mainnet · Rust · alloy · PM2 · deployed

- Live 24/7 service with **progressive DRY→SOFT→LIVE deployment**, circuit breaker, Telegram alerting, and PM2 supervision; full server hardening (SSH, UFW, fail2ban). End-to-end ops ownership of a money-handling production system.

RustIO / SystemKraft — Single-Binary Deployment Model · *Rust* · *rustio-admin* · *PostgreSQL*

- Framework (authored) whose apps ship as **one statically-linked binary — no build step, no Node/frontend pipeline** to run in CI or on the box. SystemKraft runs a public site + audited /admin CRM from that single binary against one Postgres source of truth, with a built-in audit trail and re-auth-gated destructive actions — a radically smaller operational and attack surface than a multi-service web stack.

RentQ — CI/CD & Multi-Service Stack · *Docker Compose* · *GitHub Actions* · *PostgreSQL* · *Redis* · *Elasticsearch* · *177 tests*

- 5 parallel CI jobs; multi-service Docker Compose (DB, cache, search, workers); 5-tier rate limiting; HMAC-signed webhooks with exponential backoff (5 min → 7 days); search layer with automatic fallback (zero downtime).

Django Auth Platform — Deploy Reference · *Docker* · *Gunicorn* · *GitHub Actions* · *51 tests*

- Non-root container, automated startup migrations, reverse-proxy headers, SSL redirect, secure cookies; CI gate (Ruff lint + tests) before deploy.

JobFlow — Production Platform · *Docker Compose* · *Celery* · *Redis* · *Gunicorn* · *WhiteNoise*

- Async worker fleet for bulk operations, scheduling, and webhook delivery; containerized production stack.

AI / MCP Infrastructure · *3-container Docker stack*

- Read-only-enforced database access for AI agents at both grant and application layers.

EDUCATION

2010 Linköping University (SE) — SW Engineer equivalency · 2004 Paris 6 (FR) · 1999 Al-Azhar — technical engineering
