Re: Application for Backend / Software Engineer

Dear [Hiring Manager],

I'm applying for the **Backend / Software Engineer** role at **[Company]**. [One specific sentence on why this company — their product, mission, or a problem they solve]. With 15+ years building production systems in Python and Rust, I can contribute from day one.

I design backends that survive real load. I built a Django platform with 100+ REST endpoints, role-based access, and async Celery processing that replaced legacy systems, and a multi-tenant queue engine with atomic transactions and row-level locking — its hot path accelerated with a Rust core via PyO3. Across my work I've shipped ~208,000 lines of code with 5,700+ automated tests. I value what [Company] seems to: correctness, clean API contracts, and systems you can test and trust — with security designed in, not bolted on.

I'm based in Stockholm with EU work eligibility, and I work in English and Arabic with working Swedish. I'd welcome the chance to discuss how I can help [Company] [specific goal, e.g. "scale its platform reliably"]. Thank you for your time.

Sincerely,

Abdulwahed Mansour
