

Abdulwahed Mansour

Smart Contract Auditor / Blockchain Security Engineer

Stockholm, Sweden · +46 76 930 8145 · abdulwahed.mansour@gmail.com

github.com/abdulwahed-sweden · linkedin.com/in/abdulwahed-sweden · EU work eligibility · Remote-first

Covers: Smart Contract Auditor · Blockchain Security Engineer · DeFi Protocol Engineer

SUMMARY

Blockchain security engineer working the full DeFi stack — protocol design, smart-contract auditing, and on-chain/MEV systems. I shipped a multi-chain ERC-4626 vault protocol with on-chain invariant verification (1,630 tests), discovered a vulnerability *class* across Aave V4, Morpho Blue, and Curve crvUSD (responsibly disclosed), and run a production Aave V3 flash-loan liquidation bot on Base mainnet in modern Rust alloy. I write contracts the way an auditor reads them: invariants first, fuzzing always, a reproducible PoC for every claim.

TECHNICAL SKILLS

AREA	TECHNOLOGIES
Smart contracts	Solidity 0.8.x, ERC-4626 / ERC-20, Foundry, Hardhat, Echidna fuzzing
Solana	Rust, Anchor programs
On-chain / MEV	alloy (Rust), flash-loan liquidation, gas strategy, mempool monitoring, Base L2
Vuln classes	reentrancy, oracle manipulation, flash-loan attacks, invariant breaks, precision/rounding, access control
Forensics	transaction tracing, clustering, entity attribution
Off-chain	Rust (Tokio), Python, TypeScript — indexers, bots, infra
Platforms	Immunefi, Sherlock, Code4rena

FINDINGS

TARGET	FINDING	SEVERITY
Aave V4	ADS phantom-yield extraction	Critical
Morpho Blue	ADS invariant violations, 3 types	Critical
Curve crvUSD	ADS fee asymmetry	Critical
Moonwell / Mamo	SlippagePriceChecker boundary condition	High
ENS	Gas griefing in SignatureUtils.sol	Medium
Fluid DEX V2	Liquidation dust debt → unclosable positions	Low-Med

EXPERIENCE

DeFi Protocol Engineer & Security Researcher — 2022 – Present · Immunefi / Sherlock / Code4rena · Remote

Designed/built DeFi protocols and audited live ones across EVM + Solana; discovered the ADS class (responsibly disclosed).

Independent Software Engineer — 2010 – Present · Stockholm

FLAGSHIP PROJECTS

Amend Protocol — Multi-Chain DeFi Vault Ecosystem · Solidity 0.8.24 · Rust · Anchor · Foundry · 1,630 tests (incl. 1,000-run fuzz)

- ERC-4626 vaults, lending pools, governance across EVM + Solana; 37 EVM contracts, 15 Rust modules; on-chain invariant guards (FairFeeGuard, EthicsGuard, YieldProof) enforcing "No Fee on Loss" structurally.

HuntLoan — Aave V3 Liquidation Bot (Base mainnet, deployed) · Rust 2024 · alloy v1 · Solidity 0.8.20

- Production MEV bot: HF velocity prediction, 3-tier × 3-regime gas strategy, dual-shot parallel execution, circuit breaker, Telegram alerting; progressive DRY→SOFT→LIVE deploy.

BTC Sentinel — On-Chain Forensics & MEV Research · Rust · Python · Solidity · 111 tests

- 4-phase Aave V3 liquidation analysis (33,827 events); dual-DEX (Uniswap V3 + Aerodrome) atomic liquidation sim; traced the Bybit/Lazarus theft (42,479 addresses) in 36 s.

Audit Portfolio · Foundry · Anchor — Fluid DEX V2, Moonwell, Folks Finance, Superfluid, LayerZero (Stellar), XRP Ledger, ENS, Curve, Morpho, Aave.

EDUCATION

2010 Linköping University (SE) — SW Engineer equivalency · 2004 Paris 6 (FR) · 1999 Al-Azhar — technical engineering
