Re: Application for Platform / DevOps / SRE Engineer

Dear [Hiring Manager],

I'm applying for the **Platform / DevOps / SRE** role at **[Company]**. [One specific sentence on why this company — their infrastructure, scale, or a reliability challenge they face]. I'm an engineer who ships *and operates* what I build, with 15+ years across development and the infrastructure that runs it.

I take systems from local dev to live production. I run a 24/7 service deployed to mainnet with a progressive DRY→SOFT→LIVE rollout, circuit breaker, alerting, and full server hardening (SSH, UFW, fail2ban). I've built multi-service stacks (PostgreSQL, Redis, Elasticsearch, workers) on Docker Compose with parallel CI pipelines, automated migrations, rate limiting, and graceful degradation — across AWS, GCP, and Azure. I optimise for reliability you can reason about: deterministic deploys, observable systems, and least-privilege by default.

I'm based in Stockholm with EU work eligibility (English and Arabic, working Swedish). I'd welcome the chance to discuss how I can help [Company] [specific goal, e.g. "improve deployment reliability and reduce toil"]. Thank you for your time.

Sincerely,

Abdulwahed Mansour
