Re: Application for Rust / Systems Engineer

Dear [Hiring Manager],

I'm applying for the **Rust / Systems Engineer** role at **[Company]**. [One specific sentence on why this company — their systems, performance needs, or what they're building in Rust]. I specialise in Rust for performance- and correctness-critical software — and in shipping it as complete systems a company can actually run.

To prove that end to end, I authored **RustIO**, a "Django-for-Rust" web + admin framework (typed core, guided CLI, Postgres-first admin with auth, RBAC, MFA, and a full audit trail designed as one system), and then built real products on it for the Swedish market — including a self-hosted EU whistleblower-compliance system (lag 2021:890) that keeps data on the employer's own server, each deployed as a single binary with no build step. Alongside that I've written 115,000+ lines of production Rust under a zero-unsafe policy and the strictest Clippy config: a forensic engine doing 20,000 transactions/second and 50,000 address-clusters/second from one statically-linked binary, a WASM prayer-time engine live on Hugging Face Spaces, and Rust cores embedded into Python via PyO3 to fix hot paths without a rewrite. I design for the hot path and for code that's safe by construction — which is what [Company] needs at this level.

I'm based in Stockholm with EU work eligibility (English and Arabic, working Swedish). I'd welcome the chance to discuss how I can help [Company] [specific goal]. Thank you for your time.

Sincerely,

Abdulwahed Mansour
