Re: Application for Security / Application Security Engineer

Dear [Hiring Manager],

I'm applying for the **Security / Application Security Engineer** role at **[Company]**. [One specific sentence on why this company — their product's threat model, security posture, or a challenge they're tackling]. I'm a security engineer who builds the tools as well as breaks the systems.

Alongside 15+ years of software engineering, I author offensive-security platforms in Rust (94K+ lines, 782+ tests, zero unsafe) and run forensic and audit work that produces results, not just reports. I discovered a vulnerability *class* affecting three major lending protocols (responsibly disclosed through Immunefi/Sherlock/Code4rena), and built a forensic engine that traced an on-chain theft across 42,479 addresses in 36 seconds. Every finding ships with a reproducible PoC — an engineer's discipline behind an attacker's mindset, which is exactly what [Company] needs to find and fix issues before adversaries do.

I'm based in Stockholm with EU work eligibility (English and Arabic, working Swedish). I'd welcome the chance to discuss how I can strengthen [Company]'s security. Thank you for your time.

Sincerely,

Abdulwahed Mansour
