

Abdulwahed Mansour

Rust Engineer — business systems as a single binary

Stockholm, Sweden · +46 76 930 8145 · abdulwahed.mansour@gmail.com

I build business systems in **Rust** that a company runs as **one binary** — one PostgreSQL, a complete audit trail, no build step, no SaaS bill. I authored **RustIO**, a Postgres-first admin framework for Rust, and ship real products on it for the Swedish market.

RUSTIO — THE FRAMEWORK I AUTHORED

rustio-admin — a Postgres-first admin framework for Rust ("Django Admin for Rust"). Authentication, sessions, recovery, role-based access, MFA, and a complete audit trail are designed as **one system**, not bolted on. An admin surface is one derive, one impl, one register call.

12-crate Rust workspace · single binary · no build step · no frontend pipeline.

rustio — the web framework: plain Rust structs become a working admin UI, database, auth, and HTTP server, with a guided CLI that turns a one-sentence brief into a reviewed schema.

6-crate Rust workspace.

PRODUCTS BUILT ON RUSTIO

SystemKraft — business systems for Swedish enterprises: a public site and a fully-audited /admin CRM served from one Rust binary against one Postgres source of truth.

Lursystem — a self-hosted EU whistleblower-reporting system for Swedish employers (EU Directive 2019/1937 → *lag 2021:890*); the data stays on the company's own server.

clinicflow · **obddesk** · **shop** — vertical demos proving the framework across clinic, diagnostics, and retail.

WHAT I BUILD FOR COMPANIES

- **Internal admin & back-office systems** — CRM, operations, control panels. Audit-grade, one binary, one Postgres, no per-seat SaaS.
- **Compliance systems** for the Swedish / EU market — GDPR-aware, self-hosted, data stays in-country.

STACK

Rust · Tokio · Axum · Serde · PostgreSQL · Docker · GitHub Actions CI

zero unsafe · **strict Clippy** · **single-binary deployment**

15+ years of software engineering · English (professional) · Swedish (working) · available for Rust projects in Stockholm and remote across the EU.
