Re: Application for Rust / Systems Engineer

Dear [Hiring Manager],

I'm applying for the **Rust / Systems Engineer** role at **[Company]**. [One specific sentence on why this company — their systems, performance needs, or what they're building in Rust]. I specialise in Rust for performance- and correctness-critical software.

I've written 115,000+ lines of production Rust across 18 projects under a zero-unsafe policy and the strictest Clippy configuration. I built a forensic engine doing 20,000 transactions/second and 50,000 address-clusters/second from a single statically-linked binary with zero-copy parsing and type-safe domain models, a 36-crate async platform on Tokio, and an on-chain bot on modern alloy. I also bridge Rust into Python via PyO3 to accelerate existing systems without a rewrite. I design for the hot path and for code that's safe by construction — which is what [Company] needs at this level.

I'm based in Stockholm with EU work eligibility (English and Arabic, working Swedish). I'd welcome the chance to discuss how I can help [Company] [specific goal]. Thank you for your time.

Sincerely,

Abdulwahed Mansour
